

the allen
institute
brand
language/

We use a **breadcrumb approach** to hierarchy and naming. As a center for foundational research, our structural environment is formed of **dynamic connections** determined by our **accelerators**.

Welcome to the allen institute brand language, one built on the principle of ‘we are what we say and how we say it’. Our being is identified by our voice, which is consistent as it flexes and scales across audiences, intentions, and touchpoints.

everything is a journey

about / people / research / open science / careers

360°

Our comms and messaging are joined-up, sharing the **same building blocks** and **visual language**. Stories are scaled accordingly across different touchpoints.

iconography/

Our icons should be simple, understandable, linear, geometric, and scalable.

custom
font family/

We have our own exclusive typeface family, named **Allen Institute**, which includes five weights in both **roman** and **italic** styles.

It also comes in two further editions: **headline** and **text**.

The **text edition** is for below 24pt. and is designed with certain typographic features, like a curved tail ‘l’ and a lower stroke contrast to maximise legibility and clarity. For better scalability and readability, it has a wider letter spacing which should never be altered.

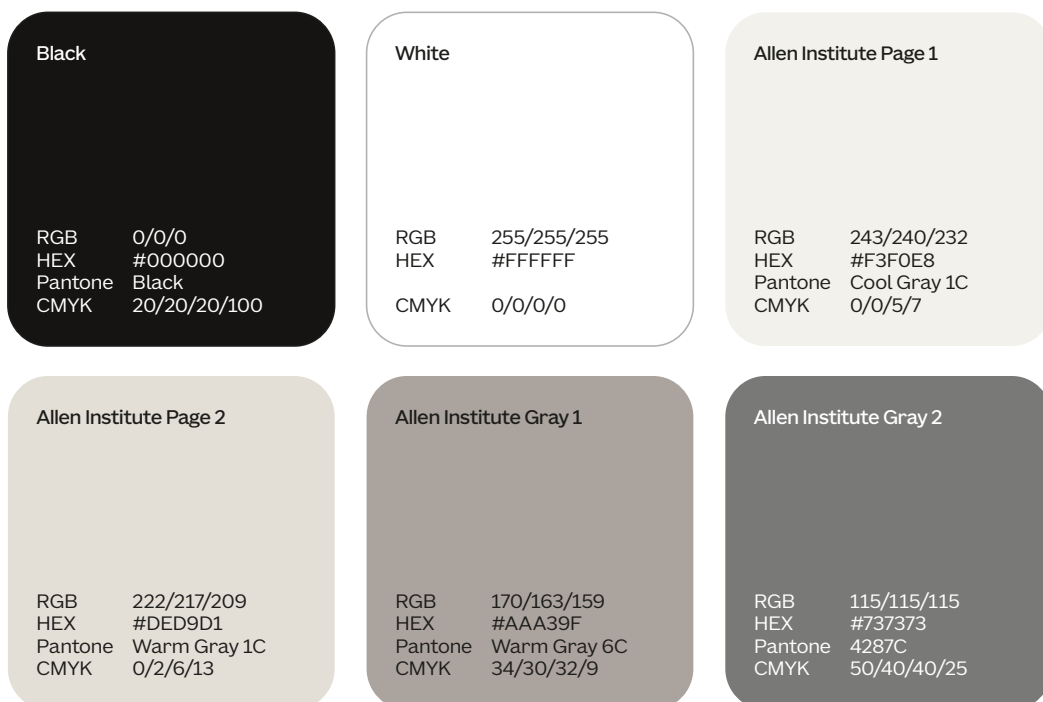

The **headline edition** is for copy larger than 24pt, and should be **tightly letter spaced**. It has a higher stroke contrast and brings personality to the brand.

forward
slash/

We use a **forward-slash** as a way to articulate connection and separation, indicating more content to follow.

Evolving from the **breadcrumb approach** to naming and journey, the forward-slash represents our accelerators with an emphasis on impact and dynamism.

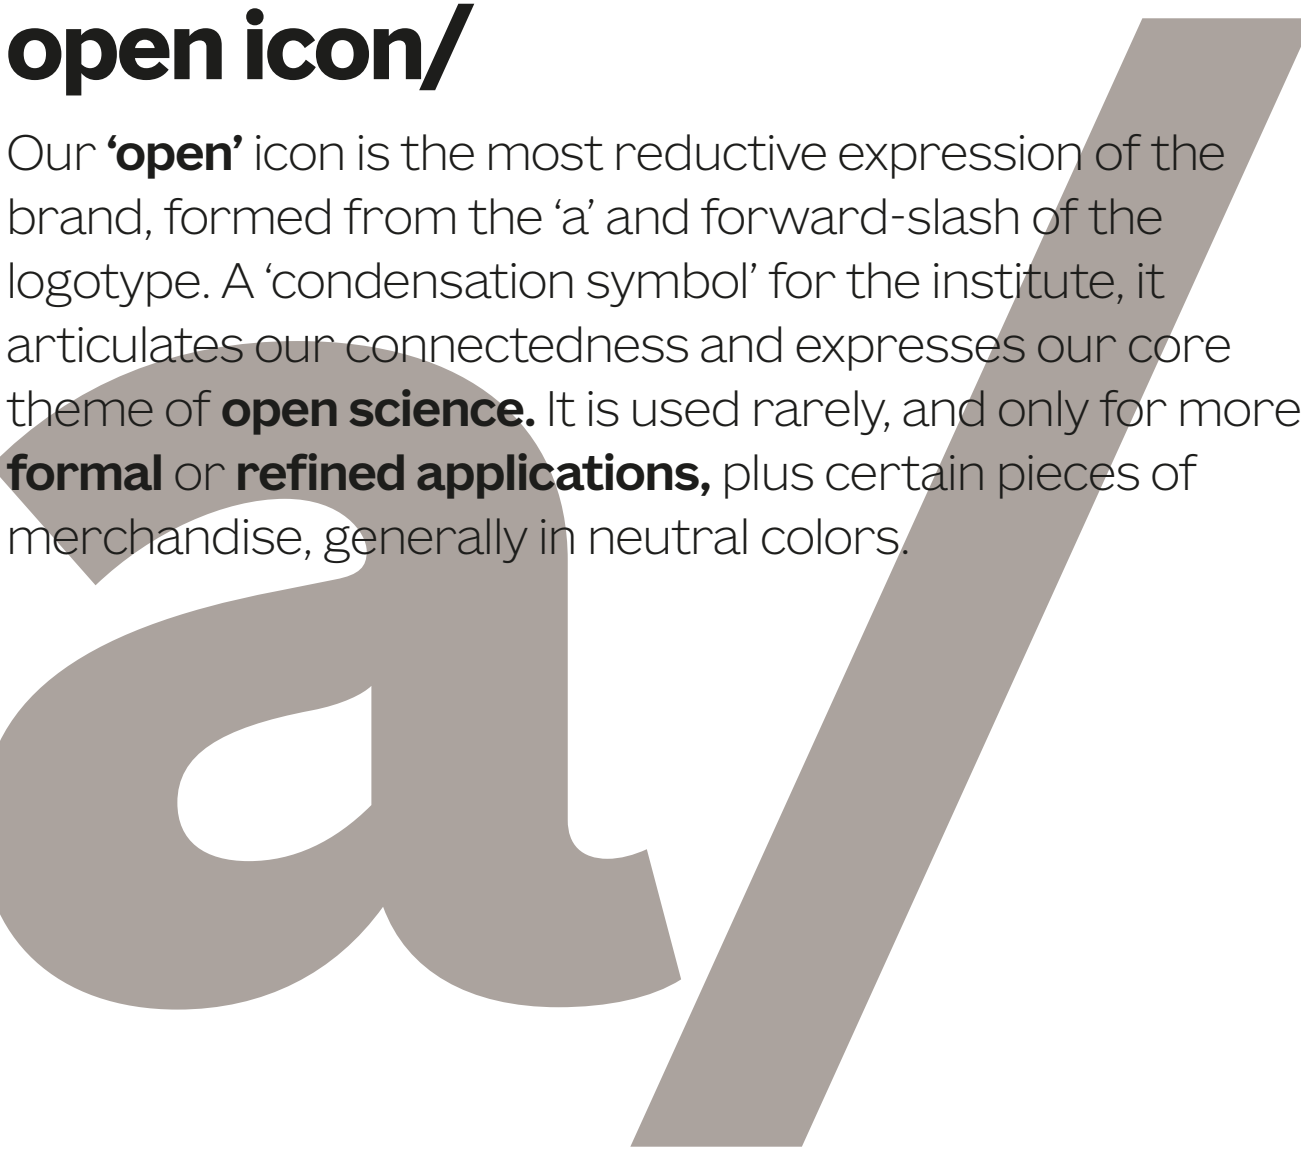

base/

core color palettes/ Our **base** palette comprises neutrals: black, white, gray, and tones of warm gray for backgrounds and more factual content. The **primary** and **accent** palettes are used to bring a sense of **vitality, energy, dynamism**, and **boldness**. Backgrounds tend to be primary, accents as highlights.

open icon/

Our ‘**open**’ icon is the most reductive expression of the brand, formed from the ‘a’ and forward-slash of the logotype. A ‘condensation symbol’ for the institute, it articulates our connectedness and expresses our core theme of **open science**. It is used rarely, and only for more **formal** or **refined applications**, plus certain pieces of merchandise, generally in neutral colors.

primary/

accent/

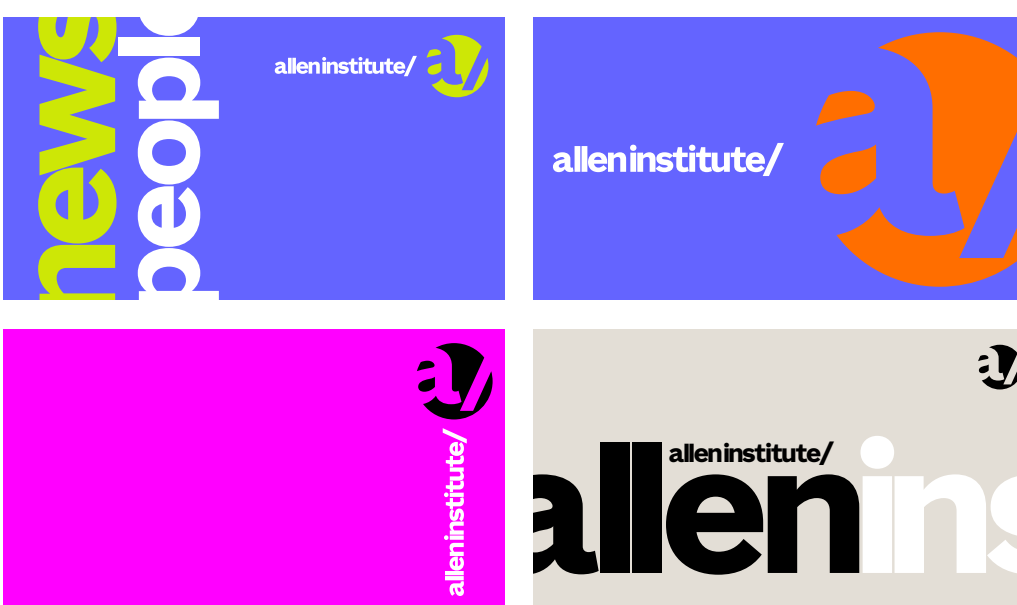

allen institute/

logotype and icons/

Our ‘**lens**’ icon is a device that zooms in on our ‘**open**’ icon (below), articulating our foundational approach to **focus, discovery, revelation**, and **identification**. It is always used as our profile icon, and is often locked up with the logotype. We can use any of our core palette colors, ensuring legibility on various backgrounds. We apply the logotype horizontally or vertically.

The **stacked version** of the logotype and lock-up is used rarely, and only when space is limited.

institute/

alleninstitute/

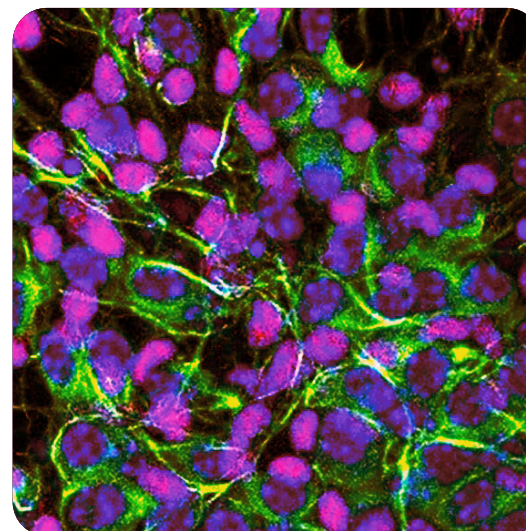

lens icon as
container/

We can use our lens icon to **contain images or video**. This brings an emphasis on content and process, **using the lens as a focus or spotlight** and linking the brand to its scientific processes.

We don’t place portraits in the lens icon.

cropping the icon/

We can bleed the lens icon off either one or two edges of any page to bring energy and dynamism. We recommend using the right or top edges, and no more than 25% of the icon bleeding off.

We create, curate and select iconic images featuring **people, science**, and **place**. Images are always cropped and positioned dynamically within the frame.

image
direction/

Infographics are simple, dynamic, and engaging.

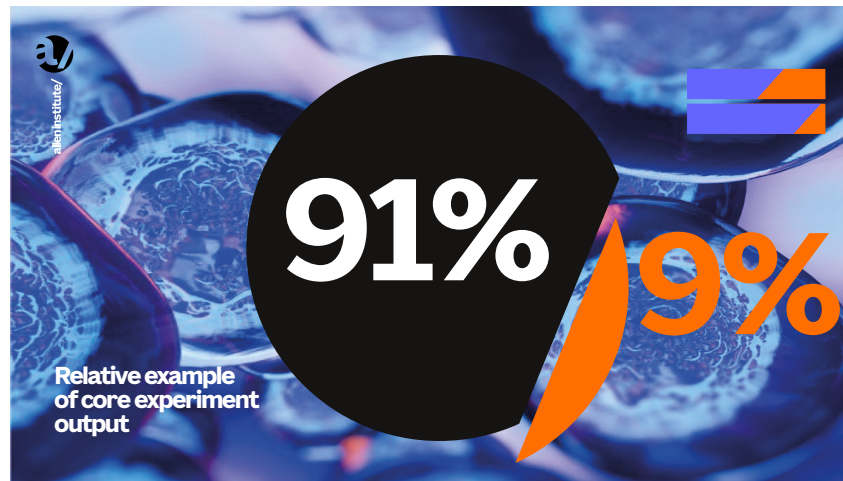

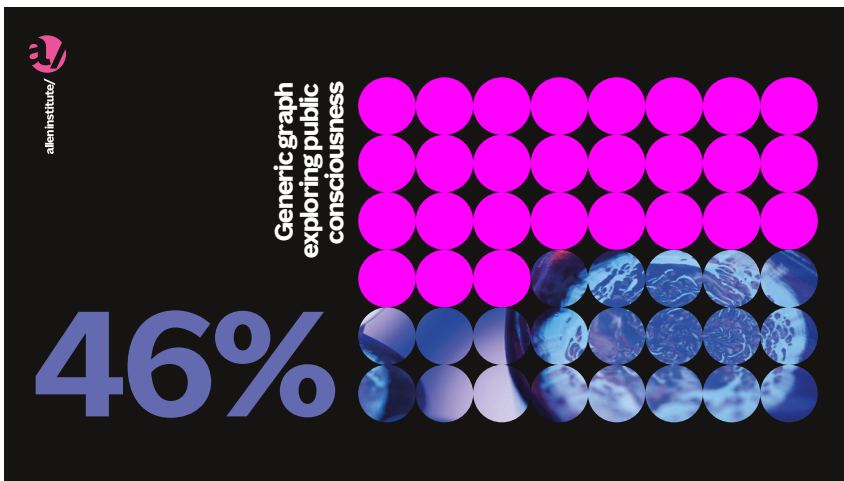

image treatment/

We can treat images graphically using **luminance** or **colorization**. This brings a graphic and more consistent visual language to the brand, and allows generalized themes as opposed to specific stories. We also increase the **contrast levels** of all our images.
